Cellesta Amnion Granulate

Cellesta Amnion Granulate is a minimally manipulated, placental allograft product offered in particulate form. Its inherent structural makeup allows it to act as a barrier in surgical, irregularly-shaped and tunneling wounds.

Cellesta Amnion Granulate is intended for homologous use only and is rich in collagen, fibronectin, hyaluronic acid and extracellular matrix proteins.

Managing the Supply Chain

It’s our focus on quality, donor selection, tissue recovery, and processing protocols that sets Ventris apart from the competition. Ventris manages the supply chain – from the origin of the tissue all the way through to its clinical application. Our proprietary Clearant™ gentle preservation technology ensures optimal viability with minimal protein degradation.

Designed for Exceptional Patient Outcomes

Ventris is dedicated to providing products that adhere to the strictest tissue banking standards, with the ultimate goal of an exceptional outcome for the patient.

The Cellesta line of human allograft products is regulated by the FDA Center for Biologics Evaluation and Research (CBER), which regulates human cells, tissues, and cellular and tissue-based products (HCT/Ps).

Flexible Use

Cellesta Amnion Granulate is supplied in a polypropylene ampoule, allowing physicians the ability to make precise and accurate applications to various types of wounds.

Customizable Sizes

Cellesta Amnion Granulate is conveniently packaged in a microcentrifuge tube with an easy-open cap and is available in a variety of volumes.
