

Biomiga™ System

Viral RNA Extraction & Purification

- The Biomiga™ System Viral RNA Extraction & Purification Kit provides an easy and reliable method for isolating total viral RNA from plasma, serum, nasopharyngeal or oropharyngeal aspirates or washes, swabs, aspirates, and sputum.
- Millions of Kits have been deployed for isolating nucleic acids from COVID-19, Influenza, SARS and other respiratory viruses as well as Hepatitis A, Hepatitis C and HIV. The isolated RNA can be used for PCR, qRT-PCR and other downstream applications.
- Specially formulated Lysis Buffer and Proteinase K provided to effectively extract viral RNA
- The highly efficient process takes less than 30 minutes including purification and saves up to 40% of base reagents compared to other RNA extraction systems. No phenol-chloroform extraction or time-consuming alcohol precipitation is used.

KEY POINTS:

- **Manufactured in the USA - San Diego**
- **ISO Certified (9001:215) and FDA Registered**
- **Manual test that takes approximately 20-30 minutes to complete 96 preps ready for RNA Amplification using RT-PCR**
- **Stable materials can be used at room temperature**
- **Must be done in a CLIA accredited laboratory using 5 step pipet process to isolate and purify the nucleic acid/RNA from the COVID-19 virus**
- **Requires normal wet lab equipment (centrifuges, pulse vortex, pipets, vials)**

Kit Components:

- 250 'preps' mini columns (for reverse RNA binding)
- 1 Bottle of Buffer LYE (for Lysis and binding)
- 1 Bottle of Proteinase K (to ensure complete Lysis)
- 1 Bottle of RNA Wash Buffer (to remove impurities)
- 1 Bottle of Buffer HRB (to further remove impurities)
- 1 Vial of L Solution (RNA Carriers)
- 1 Vial of DEPC-Treated dd H2O (RNA Elution)

Part No.	Product	Description
VR6568	Biomiga System	Viral RNA Extraction & Purification; Kit comes with 250 prep mini columns, 4 bottles and 2 vials
